For Immediate Release

Lumulus Technologies Thailand Factory Grand Opening

Ayutthaya, Thailand – June 17, 2025 –

Lumulus Opens New High-Speed Cable Production Line in Thailand

Lumulus Technologies announces the official opening of its new production line in Thailand – a strategic step aimed at strengthening global manufacturing capacity, accelerating time-to-market, and expanding customization capabilities for customers in the optical and high-speed communications sectors.

Located in the heart of the Ayutthaya industrial district, the facility spans over 226,000 square feet of land, with more than 57,000 square feet dedicated to factory operations. Designed for efficiency and scalability, the site supports large-scale production of DAC, ACC, AEC, and other high-speed cable solutions.

The infrastructure includes advanced assembly lines, semi-automated testing stations, and a dedicated R&D lab focused on new interconnect architectures and innovative materials.

The decision to establish this facility in Thailand was driven by both current and future geopolitical considerations, as well as the region's growing importance as a hub for advanced manufacturing.

Equally important, the choice reflects Lumulus's deep appreciation for the craftsmanship, work ethic, and graciousness of the Thai people – values that align closely with the company's commitment to quality, collaboration, and long-term partnership.

"Our new facility in Thailand marks a major milestone for Lumulus and reflects the collective effort and dedication of our incredible team. We're extremely proud and excited to open this high-speed cable production line, which will significantly enhance our ability to serve customers around the world with shorter lead times, greater flexibility, and more cost-effective solutions."

Said Ben Johnson, General Manager of Lumulus Technologies.

Beyond standard production, the facility is equipped to support special projects and tailored configurations, backed by an in-house engineering team that manages the full development cycle, from design and prototyping to validation and final manufacturing.

The launch of the Thailand facility represents not just increased capacity, but a deeper investment in the success of our customers. As we continue to grow, we look forward to building even stronger, more collaborative relationships delivering the speed, reliability, and flexibility our partners need to stay ahead in a rapidly evolving industry.

About Lumulus Technologies:

Founded in 2024 and headquartered in San Diego, California, Lumulus Technologies designs and manufactures high-speed cable solutions for next-generation digital infrastructure.
